Seminar "**Artificial Intelligence in Education**" is a permanent communicative platform that unites developers of edtech products, teachers, researchers and students.

The seminar discusses advances in incorporation of artificial intelligence into education, as well as the consequences for the entire educational system and for the participants involved in the system.

For developers. The seminar will let you to present your projects and get response, which will help to understand to what extent the projects correspond to the basic needs of the education system.

For teachers. The seminar will clarify what competencies will be on demand at the next stage of edtech development, what part of teacher's work will be automated, and what type of extra efforts should be applied.

For researchers. The seminar will provide analysis of the latest technological trends, will help to understand directions of changes of the modern educational "landscape" and will help to define he problems where further studies are needed.
